Corresponding standards

The table shows the closest equivalent standard for the steel in Cromax TUBE.

450	550 - 800	20	160 - 240	27 at - 20°C

Chrome layer

The chrome layer thickness is 20 µm min.

Surface roughness

The surface roughness (Ra) is always less than 0.2 µm and normally in the range 0.05-0.15 µm. Rt (ISO) is always less than 2.0 µm and normally in the range 0.5-1.5 µm.

Surface hardness

The chrome layer hardness is 850 HV_{0.1} min.

Straightness

The maximum deviation is 0.3 mm/1.0 m.

OD roundness

The out of roundness is maximised at 50% of the diameter tolerance interval.

OD tolerance

ISO f8 is standard.

Tolerance ranges for OD

Size, mm	upper	ISO f8, µm	lower
> 18 - 30	- 20		- 53
> 30 - 50	- 25		- 64
> 50 - 80	- 30		- 76
> 80 - 120	- 36		- 90
> 120 - 180	- 43		- 106

Typical dimensions

The table below shows dimensions, which are produced relatively frequently and which are often available from stock. Other dimensions can be supplied but delivery time will always be longer and a commitment to purchase a specified minimum quantity will normally be required.

OD x ID mm	kg/m	OD x ID mm	kg/m
30 x 16	3.97	60 x 40	12.33
30 x 20	3.08	63 x 32	18.16

		3 x 2	19.89
		3 1/2 x 2 1/2	23.86

ID tolerance

This is determined by the tolerances for OD and wall thickness.

Wall tolerances

No guarantee can be given with respect to eccentricity or wall thickness tolerance. Typical levels are ±5% for wall thickness and ±10% (of average wall thickness) for eccentricity.
